

## February is Heart Fund - Hypertrophic Cardiomyopathy Association (HCMA) Month

This nonprofit organization is dedicated to providing support, education, and advocacy for patients, families, the medical community, and the public affected by hypertrophic cardiomyopathy (HCM). This condition thickens the heart muscle, making it difficult for the heart to fill with enough blood to pump to the rest of the body. These varying systems make HCM difficult to diagnose and often result in misdiagnosis. Effective testing is an important first step in identifying HCM. Please consider giving to this worthy cause.
